打包下载全部附件

OTO系统安装,使用最新编译出的iso,dd到U盘即可dd if=out/target/product/x86/android_x86.iso of=/dev/sdX

XServer XSDL

https://play.google.com/store/apps/details?id=x.org.server&hl=zh-CN

配置Linux Deploy的配置

, GUI输出为xserve

启动: 先启动XserverXSDL, 再启动Linux

在 2016-05-13 21:20:51, xly <<u>xiaoluoyuan@163.com</u>> 写道:

Android-x86 Linux Deploy 部署

app https://play.google.com/store/apps/details?id=ru.meefik.linuxdeploy src https://github.com/meefik/linuxdeploy.git

- 1.确保android-x86已经有Intel提供的应用兼容性库,并在设置中,打开的应用兼容性设置Apps compatibility;
- 2.使用上述app链接下载linux deploy应用,并安装到android-x86;
- 3.链接https://play.google.com/store/apps/details?id=ru.meefik.busybox 下载busybox,并安装到系统;

Distribution: Ubuntu

Distribution suite: trusty (trusty 14.04, xenial 16.04)

Architecture: amd64

Mirror URL: http://mirrors.ustc.edu.cn/ubuntu/

Installation path: Partition (File: ubuntu将安装到映像文件中; Partion:安装到指定分区中)

Installation path: /dev/block/sdaX (上如过选择Partion, 将安装到指定分区sdX, 需确保该分区可用;

如果File,输入文件路径名,如:/storage/sdcard0/Download/ubuntu.img)

File system: ext4

Desktop environment: Xfce

其它选项可保持默认. 配置好后,点击Install选项;

5.将需要较长的安装时间,在未出现错误并结尾出现"<<< install ",表示安装完成;

```
[21:35:34] >>> begin: start
21:35:34] Mounting partitions:
21:35:34] / ... done
  :35:34]
          /proc ...
  :35:34] /sys ...
                    done
  :35:34] /sys/fs/selinux ... done
  :35:34]
          /dev ... done
21:35:34] /dev/pts ...
                      . done
21:35:34] /dev/shm .
21:35:34] /proc/sys/fs/binfmt_misc ... done
21:35:34] Updating configuration:
[21:35:34] dns
          mtab ... done
[21:35:34]
[21:35:34]
          Starting services:
[21:35:34] SSH :22 ... done
[21:35:36] VNC :5900 ... done
[21:35:37]
          <<< end: start
```

运行成功如图:

6.此时可通过ssh或vnc访问该Ubuntu系统。可使用RealVNC https://play.google.com/store/apps/details?https://play.google.com/store/apps/details?id=com.realvnc.viewer.android, 虽然操作性不太好。
